

Beyond any innovation.

Smart Agent QoE tool[®]

Smart Agent QoE collects on large scale anonymous information about the quality of user experience. It's a crowdsourcing solution that collects technical data in *passive mode* from the user phone, analyzing and presenting it back in the form of metrics and KPIs to give the operator a better understanding of subscriber experience.

Smart Agent QoE has a highly scalable architecture and is specially designed to handle thousands of “measurement probes”. It helps to monitor the subscriber traffic and to identify potential geographical areas that may require tuning or expansion and provides input to marketing departments.

What data and how often

	Services	How to make data collection	Details	Events/KPI
	Network layer measurement (2G/3G/4G/5G)	Trigger: 1 samples every 15 min (minimum sampling).	<ul style="list-style-type: none"> Min Accuracy = [0 – 100] meters Min Battery = until 10% Optimizations for same positioning 	Network parameters as signal and quality levels, CID, technology identification and position.
	Applications throughput	Trigger: switches Off/On of display	<ul style="list-style-type: none"> App performance evaluation when Smartphone display is switched on Min data session duration = 2 sec Min data session thrput = 16 kbps Min Battery = until 10% 	Technology, Band, CID, RNC, LAC, EnodeB, TAC, total bytes transferred per hour per AppPackage
	Wi-Fi measurement	Trigger: 1 samples every 15 min (if smartphone is connected to Wi-Fi)	<ul style="list-style-type: none"> Recurring Monitoring of Wi-Fi technology Same conditions of “Network layer measurement (2G/3G/4G/5G)” 	BSSID, SSID, Frequency, Channel, Bandwidth, RSSI, Link Speed, ISP, IP Public, Country ISP and position.
	Out of Services (OoS) / Emergency Call (EC)	Trigger: No service	<ul style="list-style-type: none"> Recurring Monitoring of OoS/ EC Min Battery = until 10% Min Accuracy = [0 – 1000] meters Optimizations for same positioning 	SIM Operator and Position
	2G/3G/4G/5G/Wi-Fi connectivity	Trigger: continuous monitoring	Recurring Monitoring of Network Technologies status	Residence Time in 2G/3G/4G/5G/Wi-Fi
	Call evaluation	Trigger: Call incoming and outgoing	Recurring Monitoring of Call status	Network parameters as signal level, CID, technology identification and position, Call Setup Time
